**Best Practices 1**

**Title: Introductory Fashion Designing Training Course Free for Girls**

**Objectives of the Practice**

1. To encourage the students for entrepreneurship in IT as well as fashion design.
2. To promote understanding of fashion design in relation to the current trends of fashion with help of I.T.

**The context**

The enrolled students belong to economically weaker families. Hence, employment is the basic requirement of them, which is difficult to get in this competitive era. As the College provides IT based education there are various opportunities for jobs. Our college tries to open another window to get jobs in fashion designing sectors or start their own business for girl students. Under the title of best practice "**Introductory Fashion Designing Training Course Free for Girls**".

**The practice**

Fashion designers create garments based on consumer demand utilizing their own creative vision, and consumers respond to those designs as per new trends. As an academic field of study, fashion design pulls from many disciplines, including business, and IT. The college has decided to provide new field of carrier to girl students. The selected girl students are allowed to undergo the short-term course of fashion designing. The Fashion designing course aims to combine the creativity of artistic minds with technical proficiency. The syllabus is designed such that students can learn the new trends in fashion designing along with the basic introduction. The girls from rural areas are not able to move for higher education or take a job in the IT field in metropolitan cities. Although they need it due to

Information Technology College, Beed

fulfil their personal & social needs so girl students are only considered for this course. One another reason is that as fashion design college runs under SNTD Mumbai which only for girls so we have selected only girl students.

### **Evidence of Success**

Many of the students have completed the course successfully within last three years. The students are selected on the interest basis only. Some of the students are trying to stitch their own dresses. This may lead to the development of an entrepreneur. Benefit from the course is not only to stitch clothes but also in the form of personality development in terms of proper costumes. Also, the girl students are developing a good sense of cloth wearing and imparting impotence to nearby society members. Increased attendance in the classes is also one success point.

### **Problems Encountered and Resource Required**

- Time management is a big challenge. The students don't get sufficient time for proper orientation due to the semester pattern.
- maintaining the schedule of both colleges. as the college utilized the classrooms and theory halls of fashion designing college
- Internal Assessment

### **Notes**

This activity is one of the best activity done by the college for development of the students. This is done by providing a skill base knowledge for all girl students. The girl students from rural areas are able to develop an additional skill of fashion design.

**Best Practices 1I**

**Title: “ Fill Half Save Half campaign, Creating an Awareness about Saving Water in Hotel and Restaurant”**

**Objectives of the Practice**

1. To increase the awareness of proper use of the water in hotels and restaurants by customers as well as workers.
2. To sustain the drinkable groundwater for future use.

**The context**

Water is a precious natural resource which is essential for life on the earth. Among that, drinkable water is very less and limited on the earth. Water shortage is the root of other problems. The Maharashtra government launched a scheme ‘Jalyukt shivar’ for solving water problems in drought-affected villages. Some of the people from nearby villages of Beed district are facing drinking water problems in the summer session. Hence the college adopted a best practice ‘*Fill half save half campaign*’. This initiative is aimed at saving drinking water in at least Beed city. We also planned to continue it for nearby villages after some years.

**The practice**

The college has taken initiatives for running this type of activity at hotels and restaurants nearby the college campus because the Beed district is a dry region where rain ratio is less. The college considered the importance of awareness of water conservation. Generally, a full glass of drinking water is taken and remaining drinking water is thrown away. This wastage of drinking water is not reversible. In this camp we are utilizing our first-year students for visiting hotels and restaurants and giving information about the importance of water management with the help of posters. In this poster the concept of fill half and save half is represented pictorially for the customers or waiters the poster also contains the use of regional (Marathi) language for those who don't understand English.

### **Evidence of Success**

This practice represents the fact that half glass by each customer in a hotel will save nearly 20 glass minimum for each hotel. By considering this approximation we can have a huge amount of water to be saved for further use. If this campaign is more promoted, we can save more water. The hotel owner, waiter have given a good response to this practice. The evidence of the success of this practice is the feedback given. Although success cannot be measured in terms of only water quantity, it will also induce a habit of water saving as a lifelong activity which will spread this habit from generation to generation. All hotel owners or managers are appreciating this practice.

### **Problems Encountered and Resource Required**

When we were going to do this best practice,

- The basic problem was about getting permission from the hotel or restaurant owner to paste a poster.
- We have to select the hotels in nearby locations as Beed city is having more number of hotels
- Direct customer communication is not possible due to lack of time

### **Notes**

This activity is one of the best activity for creating an awareness about water for future use. As drinking water is less in proportion. It will also help in solving water related problems and overall development of the district.
